## General Description

M27C512-10F1 is a type of UV erasable and electrically programmable read-only memory (EPROM) chip manufactured by STMicroelectronics.

### Features

It has a capacity of 512 kilobits (64 kilobytes) of memory

The access time is 100 ns (nanoseconds)

The supply voltage is 5V

It has a DIP (Dual In-line Package) package type

### Application

It can be used in embedded systems, microcontrollers, and other electronic devices for storing firmware or code that needs to be programmed only once.

It can also be used in industrial control systems, medical devices, automotive electronics, and other applications that require non-volatile memory.
