

MCU-Application Specific 8 bit, HCS08, 20 MHz, 2 KB RAM/16 KB Program, 1.8 V to 3.6 V in, LQFP-64

Manufacturers	NXP Semiconductor
Package/Case	LQFP-64
Product Type	Embedded Processors & Controllers
RoHS	Rohs
Lifecycle

Please submit RFQ for MC9S08LL16CLH or [Email to us: sales@ovaga.com](mailto:sales@ovaga.com) We will contact you in 12 hours.

General Description

MC9S08LL16CLH is a microcontroller from the MC9S08 family developed by NXP Semiconductors. It is a 8-bit microcontroller with an embedded flash memory of 16KB. The MC9S08LL16CLH has an operating voltage range of 1.8V to 3.6V and a maximum operating frequency of 16MHz. It also has an integrated analog-to-digital converter (ADC), pulse-width modulation (PWM) module, and communication interfaces such as SCI, SPI, and I2C.

Features

- 16KB flash memory
- 512 bytes of EEPROM
- 1KB RAM
- 16-bit timer with six channels
- 10-bit ADC with 12 channels
- 2-channel PWM
- SCI, SPI, and I2C communication interfaces
- Low-power consumption modes

Application

- Industrial control systems
- Home automation systems
- Security systems
- Smart energy metering
- Medical devices
