

200mA, Low Noise, Low Dropout Negative Micropower Regulator; Package: DFN; No of Pins: 8; Temperature Range: -40°C to +85°C

Manufacturers	Analog Devices, Inc
Package/Case	DFN8
Product Type	Power Management ICs
RoHS	Pb-free Halide free
Lifecycle

General Description

The LT1964 is a micropower low noise, low dropout negative regulator. The device is capable of supplying 200mA of output current with a dropout voltage of 340mV. Low quiescent current (30µA operating and 3µA shutdown) makes the LT1964 an excellent choice for battery-powered applications. Quiescent current is well controlled in dropout.

Other features of the LT1964 include low output noise. With the addition of an external 0.01µF bypass capacitor, output noise is reduced to 30µVRMS over a 10Hz to 100kHz bandwidth. The LT1964 is capable of operating with small capacitors and is stable with output capacitors as low as 1µF. Small ceramic capacitors can be used without the necessary addition of ESR as is common with other regulators. Internal protection circuitry includes reverse output protection, current limiting, and thermal limiting. The device is available with a fixed output voltage of -5V and as an adjustable device with a -1.22V reference voltage. The LT1964 regulators are available in a low profile (1mm) ThinSOT and the low profile (0.75mm) 8-pin (3mm × 3mm) DFN packages.

Features

Low Noise: 30 μ V_{RMS} (10Hz to 100kHz)

Low Quiescent Current: 30 μ A

Low Dropout Voltage: 340mV

Output Current: 200mA

Fixed Output Voltage: -5V

Adjustable Output from -1.22V to -20V

Positive or Negative Shutdown Logic

3 μ A Quiescent Current in Shutdown

Stable with 1 μ F Output Capacitor

Stable with Aluminum, Tantalum, or Ceramic Capacitors

Thermal Limiting

Low Profile (1mm) ThinSOT™ and (0.75mm) 8-Pin 3mm \times 3mm DFN Packages

Application

Battery-Powered Instruments

Low Noise Regulator for Noise-Sensitive Instrumentation

Negative Complement to LT1761 Family of Positive LDOs
